STAFF SOFTWARE ENGINEER

ANGULAR/REACT FRONTEND ARCHITECTURE • AI-AUGMENTED ENGINEERING • FULL-STACK (JAVA/SPRING)

Seasoned Staff Software Engineer with a proven track record delivering enterprise software for highly regulated financial services and fintech organizations, turning complex business requirements into scalable, customer-focused solutions through software architecture, full-stack engineering, and technical leadership.

Adept at solving complex technical challenges, influencing engineering direction, and partnering with product, design, and business stakeholders in fast-paced Agile environments. Currently introducing AI agents to modernize mortgage engineering workflows, with a record of mentoring engineers and driving engineering excellence.

TECHNICAL SKILLS

Frontend Development: Angular, RxJS, TypeScript, Modern JavaScript (ES6+), HTML5, CSS3/SCSS/SASS, Design Systems, React, Redux, Node.js, Styled Components

Backend & API Development: Java, .NET, Spring Boot, Spring MVC, Spring Batch, REST APIs, Service Integrations, Microservices, JPA/Hibernate

AI & Automation: LLM-Assisted Development (Claude Code, GitHub Copilot, Cowork, Chat), Agent Skill Development, AI Agents, MCP (Model Context Protocol) Servers, Workflow Automation (n8n), LLM Evaluation

Cloud, Infrastructure & DevOps: AWS, Docker, Kubernetes, Firebase, CI/CD, Git/GitHub, NPM/Yarn, Maven

Architecture & Engineering Practices: Distributed API-Driven Systems, Scalable Application Architecture, API Design, Performance Tuning, Test-Driven Development (TDD)

Databases: Oracle, MySQL, SQL Server, IBM DB2, PL/SQL

ACCOMPLISHMENTS

- Accelerated global product delivery at BILL by developing a scalable internationalization framework that streamlined the expansion of domestic products into international markets.
- Increased delivery consistency and reduced development complexity by implementing scalable Angular/React frontend architecture solutions across international products and Banking-as-a-Service (BaaS) offerings, supporting 6–8+ major features within each product domain.
- Grew international receivables capability at BILL , enabling multi-currency flows for Canadian market launch within 3-5 months, significantly boosting customer onboarding.
- Drove AI-assisted engineering adoption by implementing LLM-enabled development workflows, including AI coding assistants, agent-based automation, MCP (Model Context Protocol) integrations, reusable agent skills, and LLM evaluation frameworks, reducing planning and iteration cycles by approximately 30–40%.
- Led architecture, design, and full-stack development of a centralized Campaign Management platform that integrated enterprise campaign systems across Bank of America's technology ecosystem.

EXPERIENCE

Western Alliance Bank (AmeriHome Mortgage) | Westlake Village, CA **Sep 2026 - Present**

Staff Software Engineer

- Develop .NET backend services and API integrations for AmeriHome's Data Services/HAUS platform, focused on the GNMA eNote initiative: HAUS–SnapDocs integration for secured-party updates and eDelivery workflows.
- Contribute across the full lifecycle: requirements and gap analysis, solution design, implementation, database persistence, unit testing, SonarQube remediation, PR reviews, and deployment readiness.
- Drive application security and vulnerability remediation, including the current HAUS EASE work.
- Introduce AI agents to modernize engineering work, building reusable GitHub Copilot coding, analysis, and testing agents and standards, plus custom agents for user-story analysis using test-driven development.

BILL | San Jose, CA **Jan 2021 - Aug 2026**

Staff Software Engineer

- Improved product scalability and engineering efficiency by establishing reusable frontend architecture patterns supporting multiple product domains and feature releases.

Staff Software Engineer cont.

- Established design-system-driven development practices through reusable components, shared patterns, and standardized frameworks that improve consistency, maintainability, and velocity across teams.
- Drove development of scalable, high-quality frontend applications using Angular/React, TypeScript, RxJS, and modern component architectures, delivering accessible, maintainable experiences for regulated financial workflows.
- Designed and implemented critical user journeys for international payments, domestic wallet experiences, and BaaS platforms, translating complex financial processes into intuitive, reliable customer experiences.
- Contributed across the full technology stack by aligning frontend architecture with REST APIs, service integrations, distributed systems, and platform-level requirements to deliver scalable solutions.
- Built AI-enabled workflow automation and prototype LLM evaluation capabilities using n8n, integrating emerging AI practices into software delivery processes.
- Partnered with product, design, architecture, and engineering teams to deliver strategic platform enhancements and product launches aligned with customer needs and business objectives.
- Mentored approximately six frontend engineers, conducted technical interviews, elevated engineering practices, and consistently delivered production releases with zero-to-minimal defects.

Bank of America | Westlake Village, CA **Jul 2018 - Jun 2020**

Senior Application Developer

Marketing Campaign Management Platform - Lead Full-Stack Developer & Architect

- Designed and delivered the end-to-end frontend architecture while building a microservices-based framework connecting Angular/React applications with backend services, APIs, and enterprise data platforms.
- Owned database architecture and collaborated across application, infrastructure, security, and business teams to deliver scalable enterprise solutions.
- Led technical design sessions, code reviews, production troubleshooting, and root-cause analysis while coordinating delivery across onshore and offshore engineering teams.

Technologies: Angular 6, React, TypeScript, JavaScript, HTML5, CSS/SCSS, Node.js, KendoUI, Webpack, Java, Spring Boot, JAX-RS REST Services, JUnit, Mockito, GemFire, Jenkins, WebSphere

iFulfill -Full-Stack Developer (Mortgage Platform)

- Delivered full-stack enhancements across an enterprise mortgage platform, developing backend services, database solutions, middleware integrations, and Angular/React-based user interfaces within agile cycles.
- Developed and optimized data services supporting complex multi-domain enterprise applications while improving reliability, maintainability, and overall application performance.
- Participated in architecture discussions, code reviews, production support, and technical investigations to resolve complex application issues.

Technologies: Java, Spring Boot, JAX-RS REST Services, JUnit, Mockito, JRules, Angular 6, React, GemFire, Jenkins, Nexus, WebSphere, SOAP UI

Intuit | Woodland Hills, CA **Sep 2017 - Dec 2017**

Software Engineer

- Developed and supported backend financial data services, designing and consuming REST APIs focused on scalability, security, reliability, and maintainability.
- Contributed to service development, automated testing, and CI/CD improvements supporting modern software delivery practices.

Vanguard | Charlotte, NC **Mar 2015 - Oct 2016**

Java Developer

- Developed and enhanced enterprise web applications and APIs supporting institutional investment platforms using agile methodologies and test-driven development practices.
- Collaborated with infrastructure, security, database, and business teams to deliver production-ready solutions and modernize enterprise applications.

EDUCATION

***M.S., Information Technology - Web Development Focus, GPA 3.6* | University of North Carolina | Charlotte, NC**

***B.E., Electronics* | TKIET College of Engineering | Kolhapur, Maharashtra, India**
